Site  
Planning

Project  
Management

Permitting

At GLE we understand that civil engineering design is the groundwork of your vision. Civil engineering is much more than just drawing infrastructure on a site plan, it is about creating a look and feel that captures the essence of your ideas. Even if you're not sure how each piece of the puzzle is going to fit, our civil engineers can work with you to develop a plan that contains economic and constructible solutions that maximize the value of your property. We combine expertise, ingenuity and business insight to get it right the first time and ensure your project stays on schedule. GLE understands that site permitting is complex and an integral part of the civil engineering process. Numerous regulatory agencies need to approve the design concepts. We have an excellent track record in site planning, permitting, civil engineering project management and meeting our clients' goals. At GLE we not only see your vision, we see the roadway to achieve it.

## ***GLE offers the following Civil Engineering services:***

- **Construction engineering & inspections**

## ***Discover the GLE difference***

We understand the impact our design can have on your schedule and budget. GLE's team of engineers and consultants have the expertise and experience to address a wide variety of infrastructure development. With extensive experience in both the private and public sectors we can manage even the most complex projects. We will explore alternatives prior to design to ensure the most cost-effective solution.

## ***Take the next step***
